

Clever Drop

Water Efficient Sprinkler

Design based on the Australian
AWARD WINNING
Wobble-Tee Water Efficient Sprinkler

- Ideal for small lawn areas and gardens with a watering diameter of up to 8 metres.
- Consistent droplet size with minimal misting and evaporation loss.
- Low angle of trajectory reduces wind drift.
- Slow application rate, just like slow soaking rain, preventing puddling and wasteful runoff.
- Made from UV stabilised plastics for a long life in the sun.
- Internal filter to prevent debris blocking the sprinkler nozzle during operation, easily removable for cleaning.
- Water efficient, with an average flow rate of 4 litres per minute.
- Operates on low & high pressure (5 to 50psi/35 to 350KPA).

See over for more reasons why I'm so clever...

➤ PURPOSE SHAPED BASE

Use for roof cooling on sheds and aviaries. For a temporary application just run the hose over the roof peak and the sprinkler sits vertically on the corrugated iron.

For permanent installations run the sprinklers and hose across the corrugated iron securing the sprinkler through the holes provided using the existing roofing teck screws. Use 20mm metal pipe saddles to hold the hoses in place using existing roof screws.

➤ ADJUSTABLE ANGLE BASE

Upright operating position can be simply adjusted for use on uneven or sloping surfaces, such as tiered gardens. Gently flex the side skirts of the sprinkler base downward and rotate the centre turret to the desired position, then ensure the teeth are correctly engaged as you release the sled base.

➤ PRESSURE REGULATING DISCS

Four discs of varying sizes are provided for use in areas of high water pressure to control smaller watering diameters and ensure a consistently even distribution of water. These can be easily inserted under the removable sprinkler top. Diameter may vary with different water pressures.

SIZE OF DISC USED	1.25MM DISC	1.5MM DISC	1.75MM DISC	2.0MM DISC	WITHOUT DISC
WATERING DIAMETER	1.5M TO 3.0M	2.5M TO 4.0M	3.5M TO 5.0M	4.5M TO 6.0M	EFFECTIVE UP TO 8M
APPROX. LITRES/MIN	2.5	3.0	3.5	4.5	6.5
