

Wobble-Tee™

Water Efficient Sprinklers

AWARD WINNING

- Large area low pressure sprinkler, waters up to 15m diameter, for smaller areas adjust at your tap.
- No misting or run-off on low to medium pressure. If misting occurs turn down the pressure at the tap.
- Slow and even application at pressures from 15 to 40 psi (103 to 275 KPA), just like soaking rain. Will operate effectively from as low as 5 psi (35 KPA)
- Operates off an overhead water tank, pump, gravity fed system, envirocycle systems, grey water, recycled water or town supply.
- Produced from UV stabilised plastics for a long life in the sun.
- Removable screened filter allows use with dam or river water.

AUSTRALIAN MADE®

The Best Sprinkler You Will Ever Own

💧 WHAT MAKES THIS SPRINKLER SO WATER EFFICIENT?

When operated at pressures between 15 to 40 psi, the Wobble-Tee sprinkler has a very low precipitation rate of 4mm per hour and unmatched evenness of distribution, with an average flow rate of 10 litres per minute.

The Wobble-Tee sprinkler applies water in a consistently large droplet form, minimising evaporation losses and wind drift, ensuring the water reaches your lawn or garden and not evaporated into the atmosphere. Water is applied slowly and evenly, just like slow soaking rain, preventing puddling and wasteful run off.

💧 ADD-ON-ABILITY

Removable end caps allow for an additional hose connector to be added to the sprinkler base for the operation of multiple sprinklers from just one tap. To operate 3 sprinklers from the same tap you will need approx. 30 psi and 30 litres per minute volume.

💧 MAKING THE MOST OF YOUR WATER

Watering for long periods of between 3 and 6 hours allows the soil to be soaked down to the root zone of the plant. Encouraging this type of deep watering will progressively strengthen the plant, which will then require watering less frequently.

In especially hot temperatures, water your lawn or garden at night, this reduces evaporation loss.

💧 AWARD WINNING

In 2012 the Wobble-Tee Sprinkler was nationally recognised for its innovation, marketability, sustainability, design and water efficiency when it received the Smart Approved WaterMark Product of the Year Award.

Also available in purple, the international colour for grey water and effluent re-use.

OPERATING PRESSURE P.S.I	5	10	15	20	25	30	35	40
